Defense Logistics Management Standards Offic

Information Briefing
DoD WebSDR
August 18, 2003

Outline

- Meeting Goal
- DoD WebSDR Objectives
- Implementation Approach
- DoD WebSDR Advantages
- SDR PROCESS As-Is
- SDR PROCESS End State Phase I
- SDR PROCESS End State Phase II A, June/July 20
- SDR PROCESS End State Phase II B, Future
- End State SDR Architecture
- Summary

Meeting Goal

Build Phase I and II
DoD WebSDR
concept, approach,
and architecture consensus

DoD WebSDR Objectives

- **Implement a user friendly web-based method to capture supply discrepancy information:**
  - **Maximize pre-population of data**
  - **Route SDRs to correct action offices**
  - **Support reporting of SDR responses**
  - **Capture SDR and response management statistics…**

Quicker processing and greater accuracy with less effort

DoD WebSDR Advantages

- **Customer-friendly web process**
  - **Auto-fill - reduces customer input, improves accuracy**
    - **Determination of appropriate action activity**
    - **Original requisition information retrieval**
    - **Shipment information retrieval**
    - **Address, associated, calculated information**
  - **Data requirements keyed to type discrepancy**

More DoD WebSDR Advantag

- **Improved data content control**
  - **SF 364, ROD, data blocks**
    - **Remove obsolete data**
    - **Clarify existing data blocks**
    - **Add new data elements according to Component n**
  - **Drop down code lists**
    - **Expanded and current; Joint Pub-based**
  - **Supporting documentation**
    - **Photographs**
    - **Scanned image of documents**

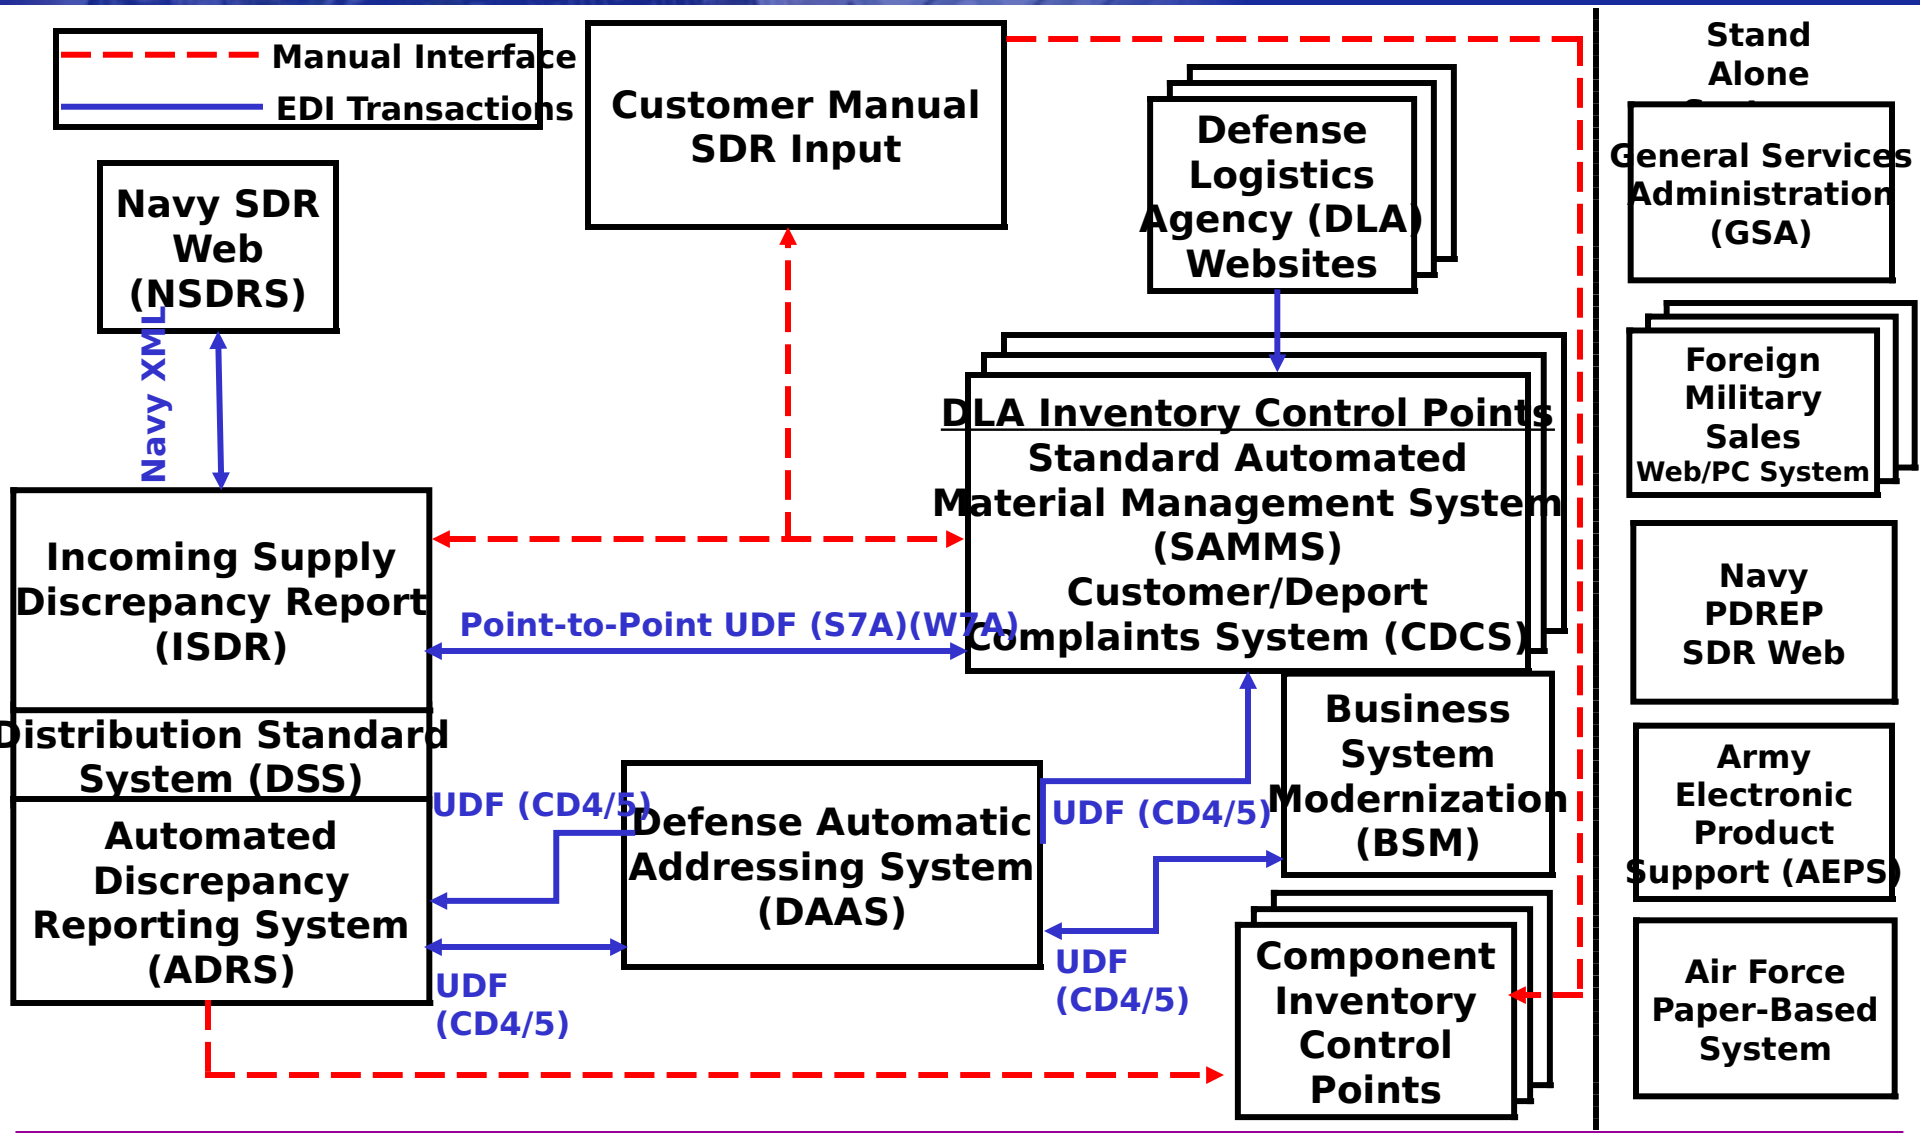
Implementation Approach

- **Phase 1 provides:**
  - **Web capability**
  - **Pre-populated data**
  - **Distribution based upon business rules and Component capabilities**
- **Phase 2 provides:**
  - **Extensive ability to receive and route SDR information using common automated transaction sets (X12, UDF, XML, etc.)**
  - **Comprehensive SDR and response data base**
  - **Reports and query capability**

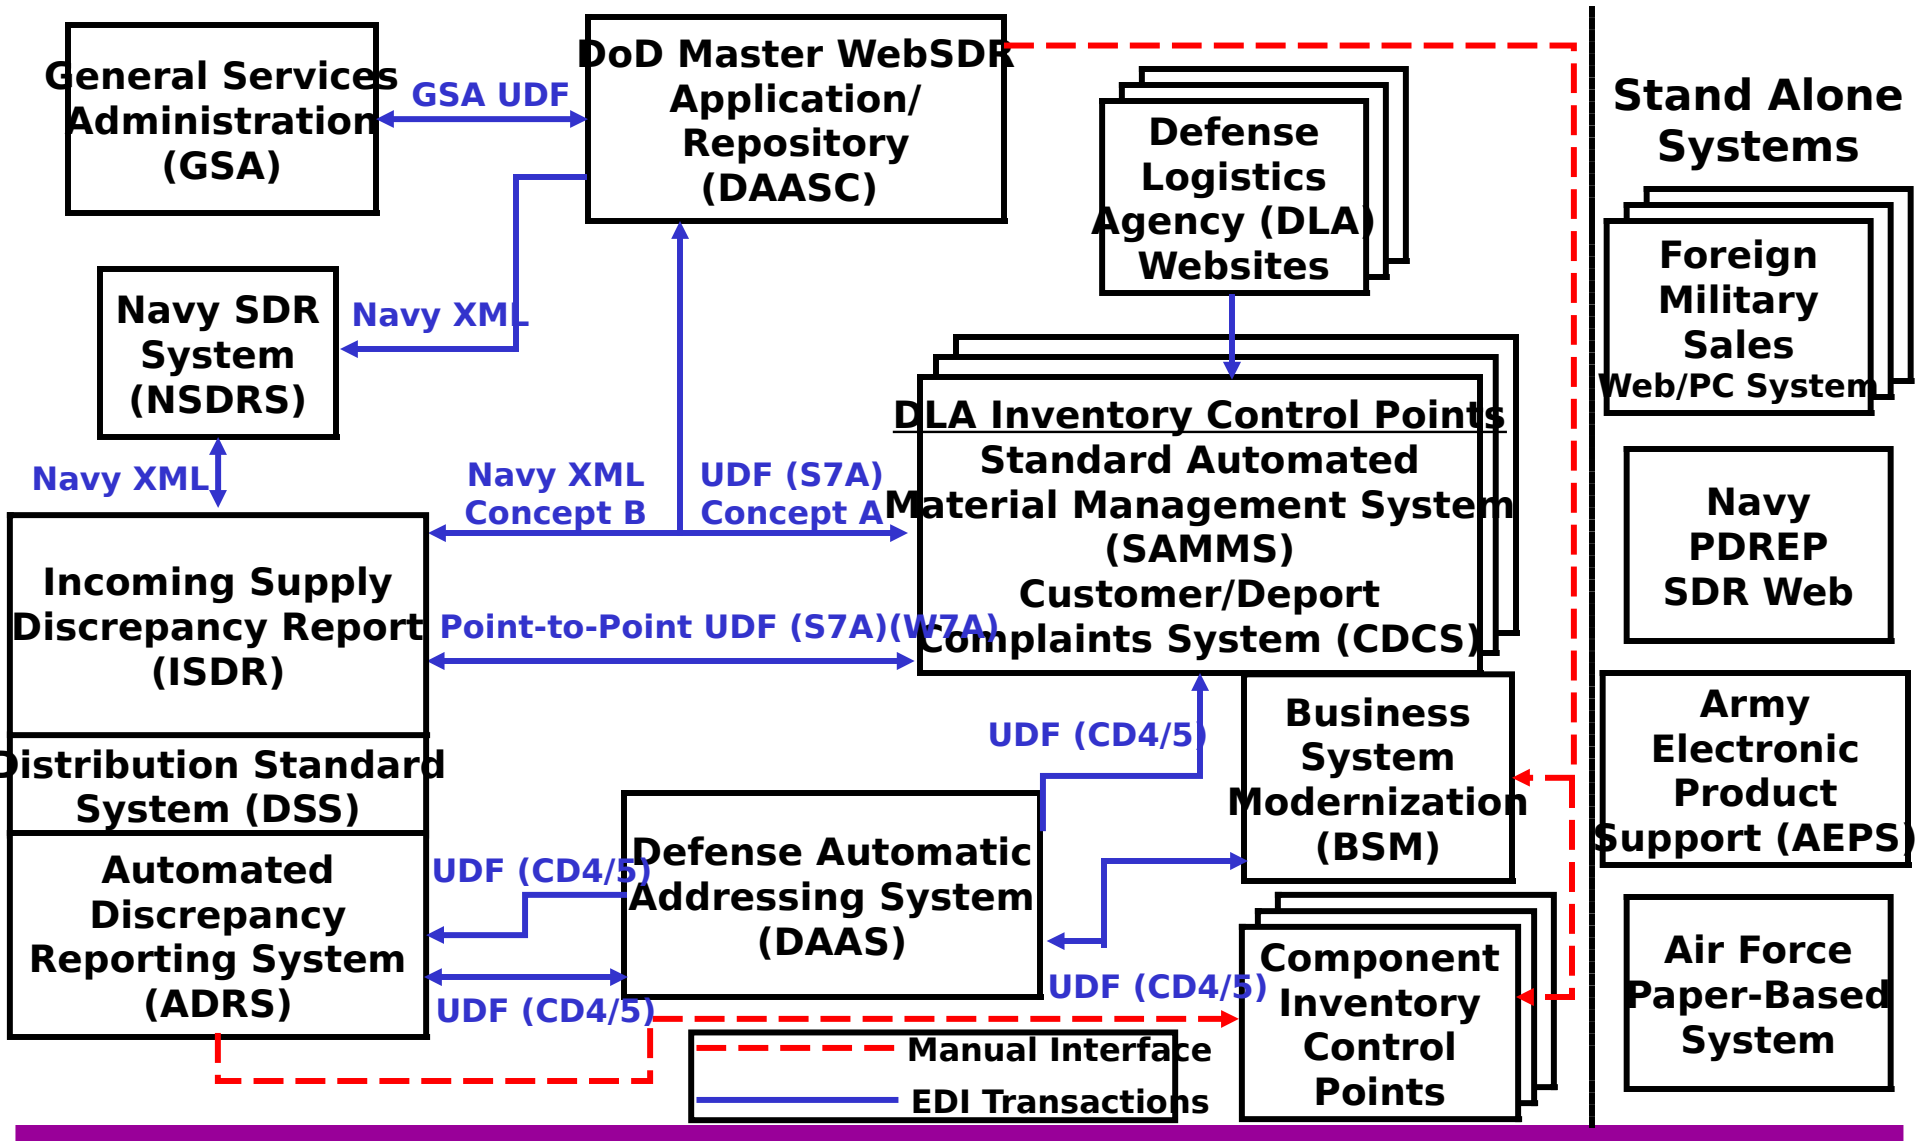
Implementation Approach

- **Major actions:**
  - **Define and map response transactions**
  - **Coordinate with Components external interface requirements**
  - **Define database and standard report requirements**
  - **Update policy and guidance**
  - **Design and build**
  - **Develop training requirements and conduct training**

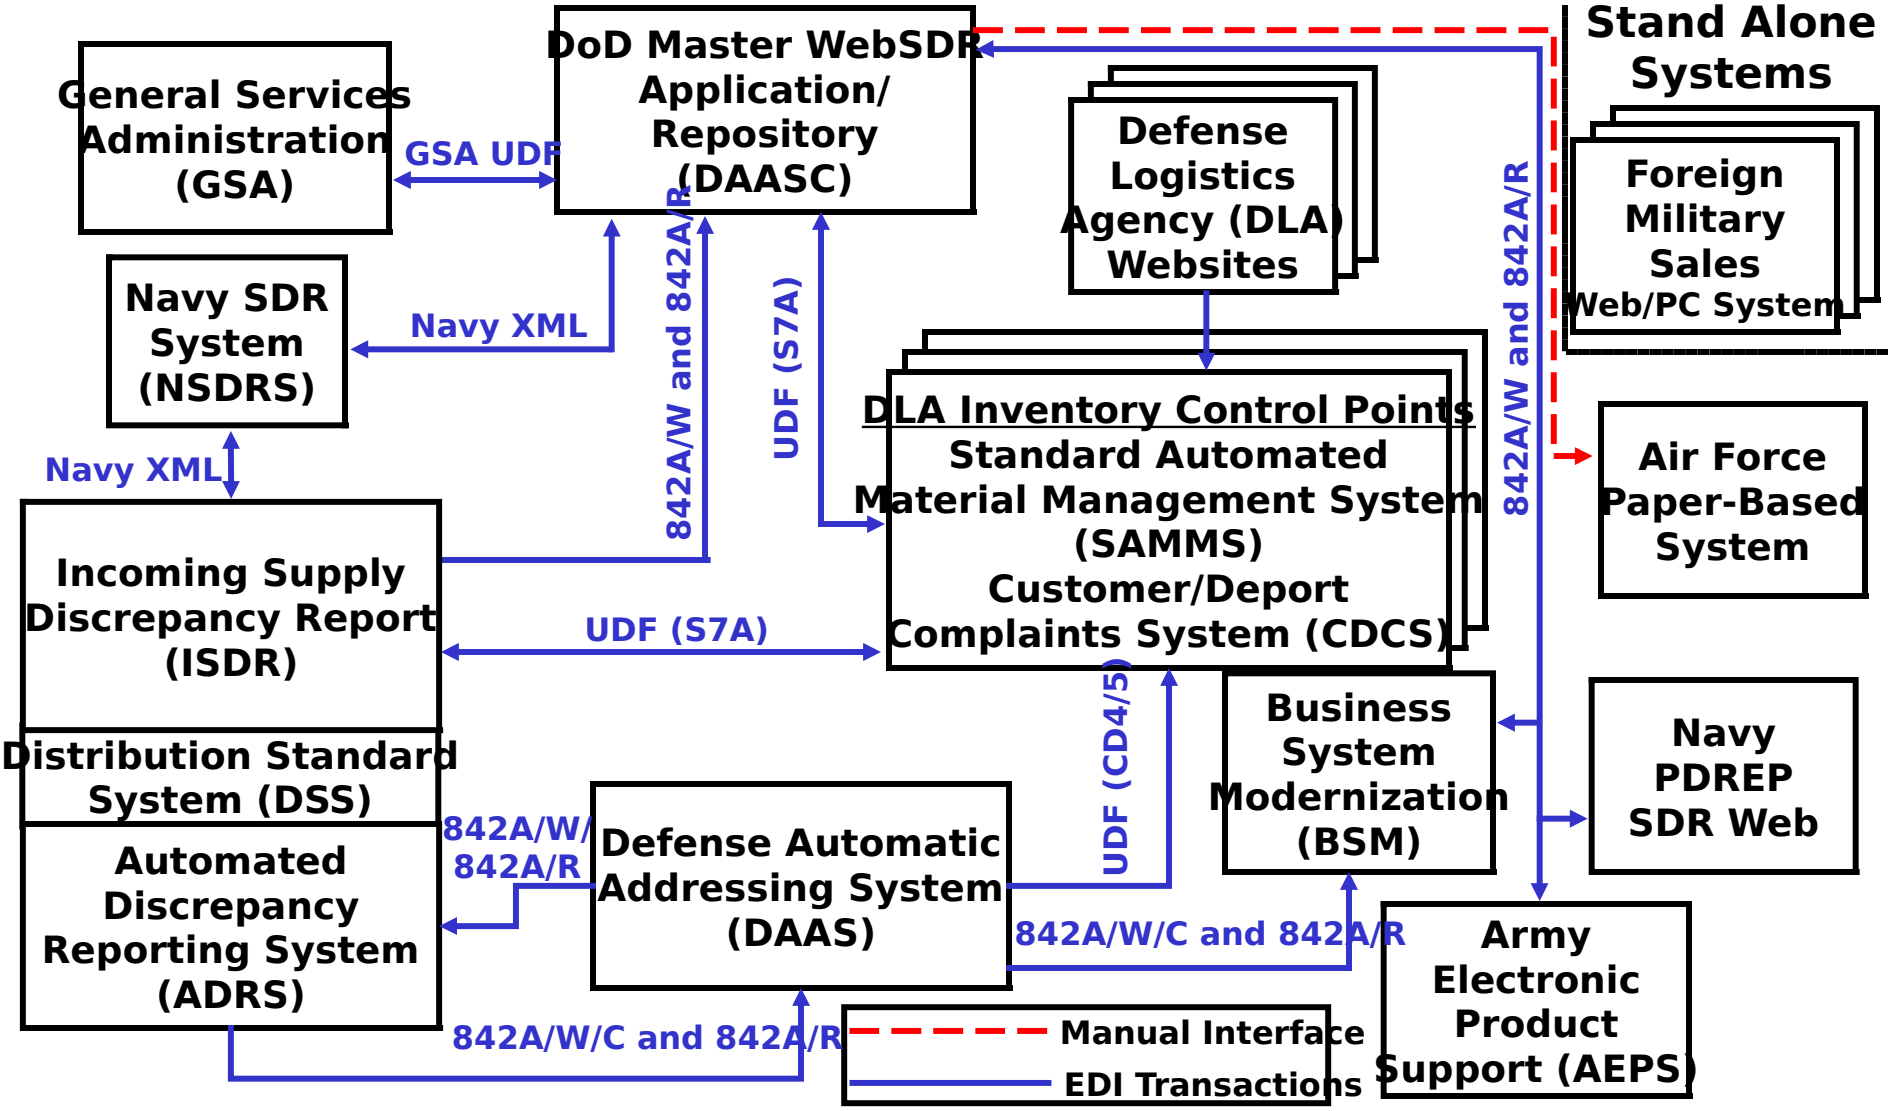
SDR Process AS-IS



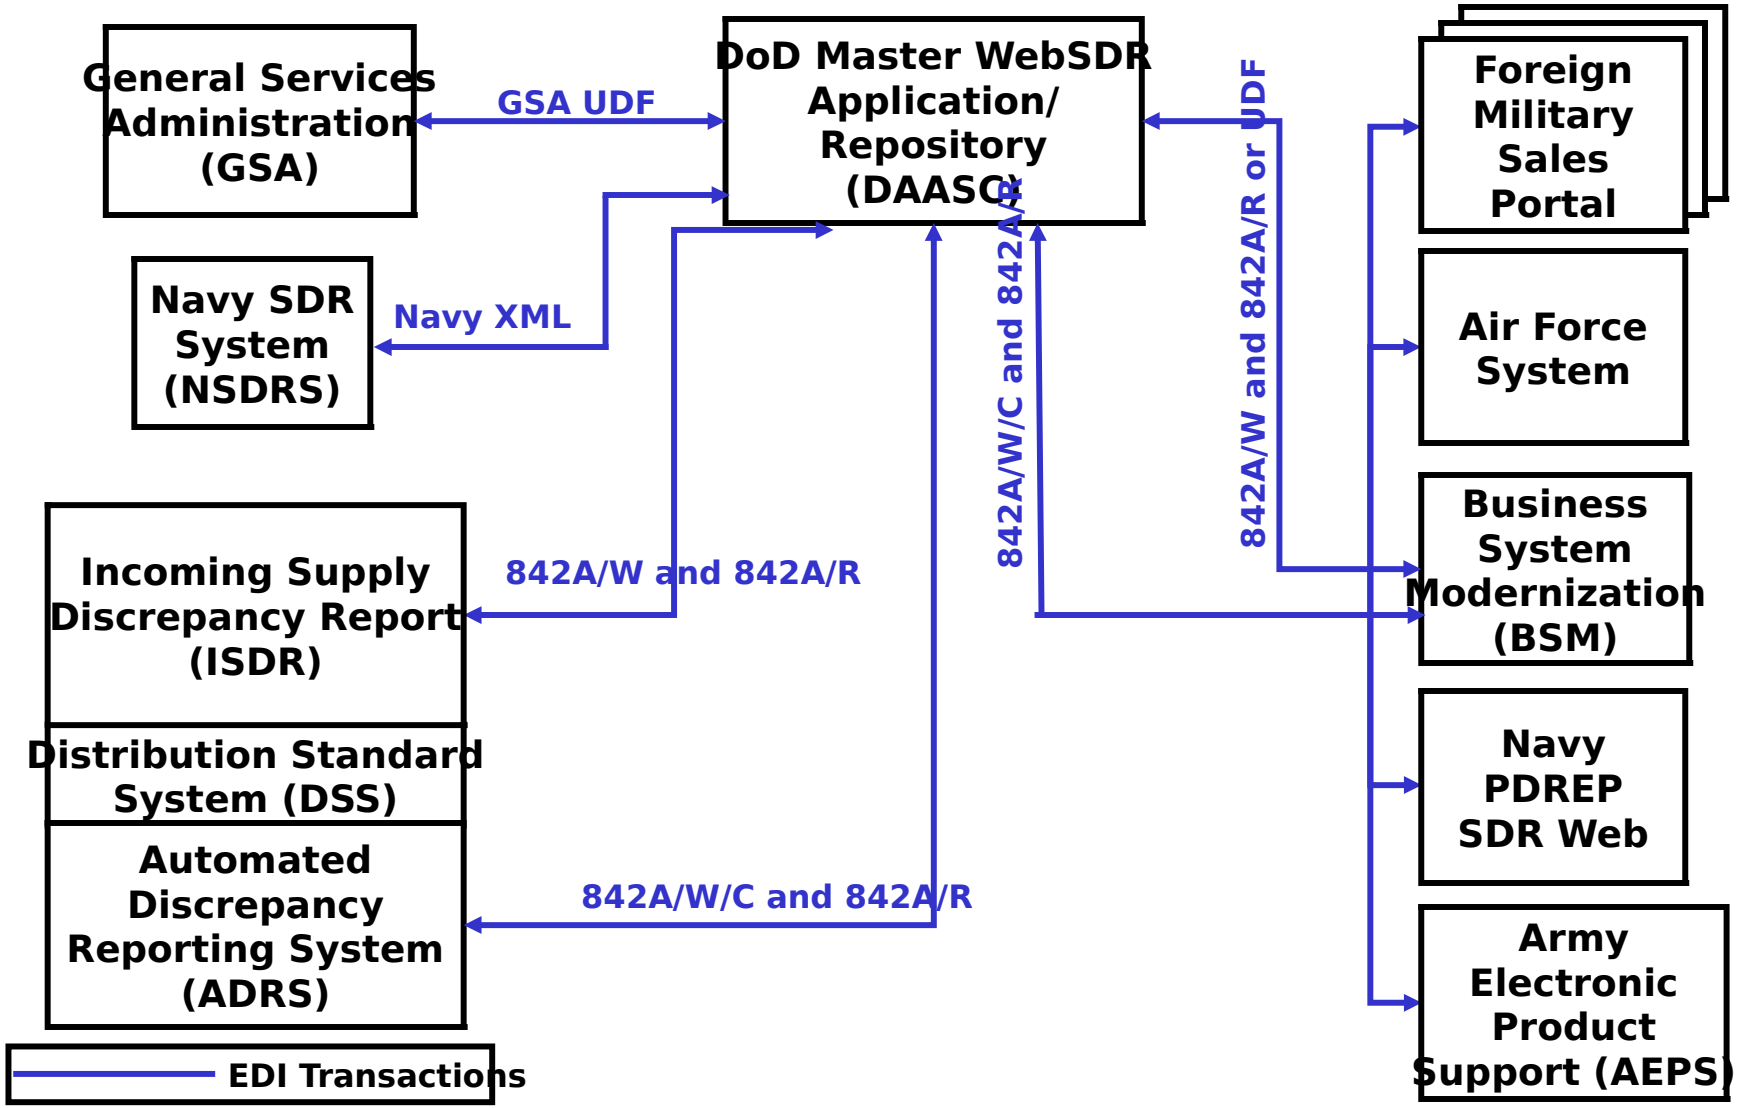
SDR Process End State Phase I



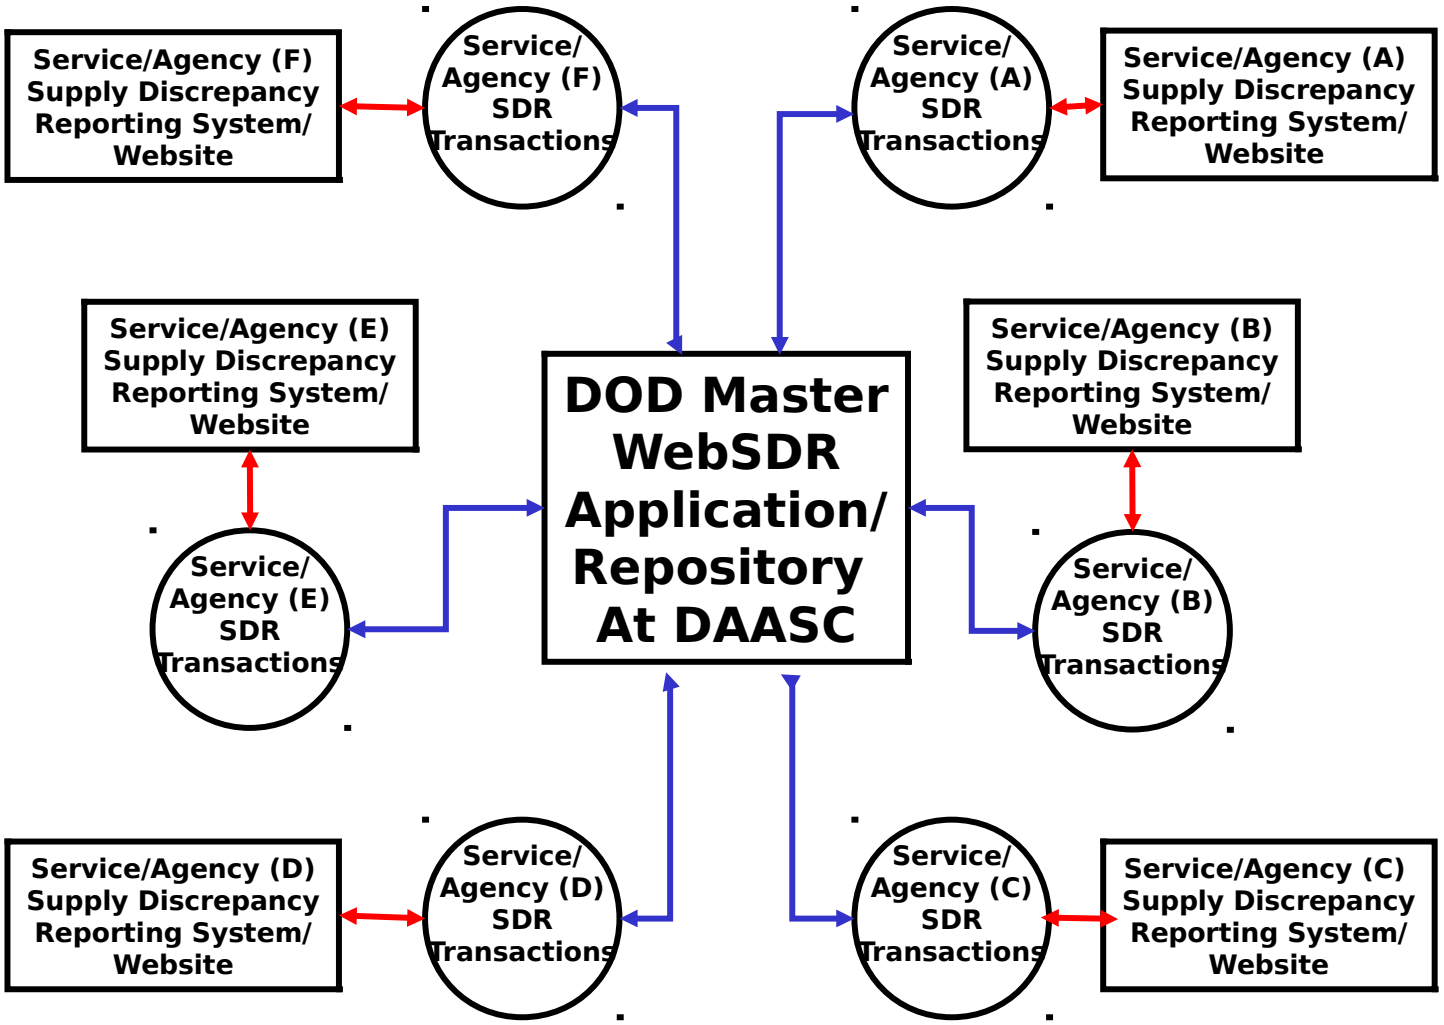
SDR Process End State Phase II A, June/July 2004



SDR Process End State Phase II B, Future



End State SDR Architecture



Note: Initial recording of SDR Transactions “ ” “ may be hard copy & mailed, hard copy Scanned and emailed, text or formatted email, UDF electronic, X12, XML, Web entry, etc

Summary

WebSDR concept, approach and architecture:

- **Maximizes pre-population of data**
- **Accommodates supporting documentation, photo, scanned documents, etc.**
- **Routes SDRs to correct action offices**
- **Supports reporting of SDR responses**
- **Captures SDR and response management statistics…**

Summary

- **What's next: Continue…if available may request OSD Business Initiatives Council (BIC) resources to expedite development process**

Any customer, anywhere, can record a supply discrepancy for any item, with minimal data entry and without regard for who manages the item or where it needs to be sent for action
